Subject: Am gettin' out?

Hi all,

I've built the NE-QRP 30-40. A nice rig to build and use. The receiver is sensitive enough and the filter tight enough.

With the 2N3053 as the final, it puts out about 950mW cold, and about 500mW warm (read: hot to the touch!). I've heard my tone on another hams rig and have responded to several CQ's with very large signals. Still to no avail.

I'm using an Inverted V with the apex about 20' up. The wire is fed with a coffee can balun (coiled coax) at the feed point. The swr shows near 1:1.

I live in Ft. Collins, CO and would like to make a sked with some of you to verify that I'm getting out.

2300Z to 0000Z seems to be good on 30m. As of late, it seems the late night condx have been unreliable. Even on 40m.

Any help would be appreciated, 72, Michael kg0ot

Craig -

I got my QRP Quartly in the mail this morning. It has a nice picture of  
the new Ten Tec Argo 556 (QRP Scout) on the cover with accompanying  
article on the inside.

Hi Ho,

Craig WB3GCK asks:

> Has the October QRP Quarterly hit the streets yet?

Mine, my first, arrived yesterday. \_Very\_ nice, though I would have  
liked a little more technical content. It's more of an operating journal  
than the other big QRP journals, which is fine. It'll help me keep my  
perspective after I read SPRAT and QRPP. :-)

The layout, print quality, and writing is good. All in all, pretty  
impressive!

Stephen

Subject: quadrature and R2

Date: Fri, 14 Oct 1994 08:26:27 -0400 (EDT)

I was really tantalized by the description of the R2 dir. con. receiver in Kanga's latest catalogue. I'd read about it before, but now the versatility and quality of the board interested me. The one thing I'm not sure on is the local osc. input. That's supposed to be in quadrature. I think this has been asked fairly recently, but is this as difficult as it looks in the ARRL handbook? Are there any kits/project descriptions out there for this?

Thanks,

VE3UWL            Bruce G. Robertson

Subject: Subscription info +

Here are the available commands that may (SHOULD) be sent to the listserver when trying to subscribe or unsubscribe to the qrp list, (or hamtech, etc.):

Remember, send a letter to:   listserv@netcom.com            NOT to qrp-l

I thought if this went to the digest form of the list it may save all of us from the attempts at joining the list via qrp-l instead of listserv.

By the way, my count of the number of names on the qrp-l list is 423!

Talk about multi-drop mailings. Or to put it another way 423 test messages for every one sent.

Hope to see some of you on the air this weekend. I'll be in Pasadena, Ca. operating an FT-7 to a 40M dipole in a tree to a tuner. I'll have to keep it fairly simple, as my station has to be carry on baggage from San Jose to Burbank!

aa7ar/6

73,

baf00@amail.amdahl.com

This is Brent Chapman's "Majordomo" mailing list manager, version 1.62.

It understands the following commands:

subscribe <list> [<address>]

Subscribe yourself (or <address> if specified) to the named <list>.

unsubscribe <list> [<address>]

Unsubscribe yourself (or <address> if specified) from the named <list>.

which [<address>]

Find out which lists you (or <address> if specified) are on.

who <list>

Find out who is on the named <list>.

info <list>

Retrieve the general introductory information for the named <list>.

lists

Show the lists served by this Majordomo server.

help

Retrieve this message.

end

Stop processing commands (useful if your mailer adds a signature).

Commands should be sent in the body of an email message to  
"listserv@NETCOM.COM".

Commands in the "Subject:" line NOT processed.

If you have any questions or problems, please contact  
"listserv-owner@NETCOM.COM".
